API Tools Documentation

The OTPWALL API allows you to integrate our services directly into your application or system. With API access, you can request numbers, receive SMS activations, manage activations, and check your account balance automatically.

Each API key is a unique **32-character** alphanumeric string. It works as a secure identifier that ensures only you can access your account programmatically.

⚠️ **Important:** Keep your API key safe. Do not share it publicly.

HOW TO GET YOUR API KEY

- Log in to your OTPWALL customer dashboard.

- Go to Sidebar → API Tools.

- Click Generate API Key.

- Copy and save your key securely.

Use this key in every API request inside the Authorization header.
Authorization: Bearer YOUR_API_KEY

API ENDPOINTS

- **BASE URL:**

   https://api.otpwall.online/v1

(E) GET LIST OF COUNTRIES/SERVERS

GET /services
[
  {"code": "telegram", "name": "Telegram"}, {"code": "whatsapp", "name":
"WhatsApp"}, {"code": "facebook", "name": "Facebook"}
]

BEST PRACTICES

- Always check your balance before creating activations.

- Cancel activations if no SMS is received to avoid being charged.

- Store API keys securely and rotate them if compromised.

- Use proper error handling to retry only safe requests.
